

# Self Leveling

*Cobra Polymers Self Leveling System is a solvent free two component 100% solid epoxy that is mixed and trowel applied to the surface to a depth of 3/8" to provide a seamless flooring system.*

*Cobra Polymers Self Leveling Epoxy can be used to even out rough floor surfaces to provide a smooth chemically resistance surface with the highest order of wear and durability. This system is available in a variety of colors in either standard or fast cure.*

## Cobra Self Leveling - Fast Cure

Cobra Self Leveling Epoxy is a solvent-free, three component coating comprising epoxy resin, curing agent (binder) and filler, and giving good leveling properties. The epoxy resin, curing agent and filler components are supplied pre-weighed and ready to be blended for use on site.

Cobra Self Leveling Epoxy produces a tough, joint free, non-porous gloss finish floor coating which is easy to clean and exhibits good chemical to fuels, lubricants, most solvents, acids, and alkalis at certain concentration levels. The product can be applied by suitable squeegee / rake, pin rake and by trowel.

2-3 hour curing time.

## Cobra Self Leveling - Standard Cure

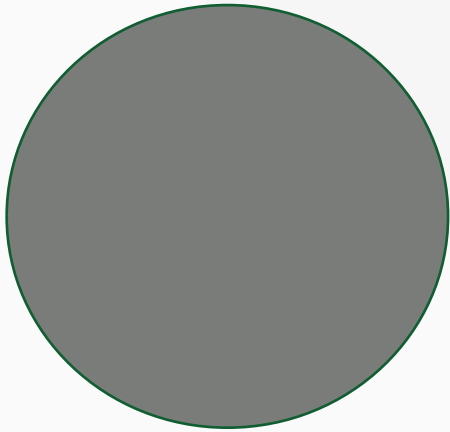

Cobra Self Leveling Epoxy is a solvent-free, three component coating comprising epoxy resin, curing agent (binder) and filler, and giving good leveling properties. The epoxy resin, curing agent and filler components are supplied pre-weighed and ready to be blended for use on site.

Cobra Self Leveling Epoxy produces a tough, joint free, non-porous gloss finish floor coating which is easy to clean and exhibits good chemical to fuels, lubricants, most solvents, acids, and alkalis at certain concentration levels. The product can be applied by suitable squeegee / rake, pin rake and by trowel.

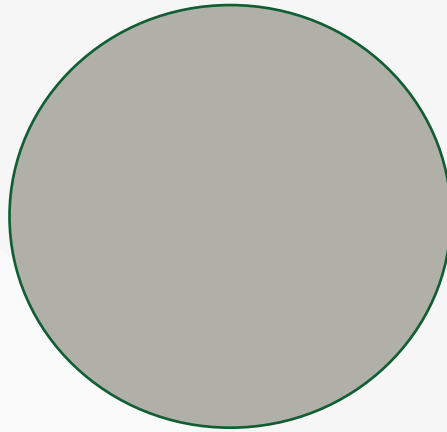

4-6 hour curing time.
